

I have 2 drill-through questions. (RanetPivotTable(5.7.130))

First, I drag 2 dimensions as below.

The Columns Section member is filtered with 105/01/01 (The R.O.C calendar is obtained by subtracting 1911 from the Gregorian calendar year)

When I drill through into cell , the returned number of items as good as below

The cell value is 1 and drill-through returns 1 item and 1 row.

Drillthrough result (1 items)

Hierarchy	Member
計畫類別	科技類
年月日	105/01/01

Cell value: 1

Measures: 企業家數

But when I drag member from Columns to Filters section, the results of drill-through is wrong. The cell value is 1 and drill-through returns 10000 items and more than 1 row.

Drillthrough result (10000 items)

Hierarchy	Member
計畫類別	科技類
企業家數	企業家數

Cell value: 1

Measures: 企業家數

Second, the drill-through 'Export to Microsoft Excel' layout. Where I can change the language?

It's Russia label, where I can change it?

Иерархия	Элемент
計畫類別	科技類
年月日	105/01/01
